

LangChain Document Loaders – Practice PDF

Use this PDF to practice loading documents with LangChain. Try PDF loaders such as PyPDFLoader and PyMuPDFLoader. Also practice splitting the loaded text with a text splitter.

1. LangChain Basics

LangChain is a framework for building applications powered by language models. Document loaders are used to load data from different sources into LangChain Document objects.

2. What is a Document?

A LangChain Document generally contains `page_content` and `metadata`. `page_content` stores the actual text, while `metadata` can contain information such as the source file and page number.

3. PDF Loader Practice

Common PDF loaders include PyPDFLoader and PyMuPDFLoader. Practice loading this PDF and inspect the number of documents/pages returned.

4. Suggested Exercises

Exercise A: Load this PDF with PyPDFLoader.

Exercise B: Print the first page content.

Exercise C: Print metadata.

Exercise D: Count the loaded pages.

Exercise E: Split the document into chunks using RecursiveCharacterTextSplitter.

Exercise F: Create embeddings from the chunks.

5. Loader Ideas

After practicing with this PDF, try CSVLoader for CSV files, TextLoader for TXT files, JSONLoader for JSON files, UnstructuredWordDocumentLoader for DOCX files, and WebBaseLoader for web pages.
